1. Introduction

1.1 Purpose

The purpose of this project is to develop an **integrated educational platform** that connects students, teachers, and parents through an interactive and intelligent learning environment. The system aims to simplify and enhance the processes of **learning, monitoring, and assessment** by providing both a **web application (React.js)** and a **mobile application (Flutter)** supported by a robust **backend (Node.js + Express.js)** and efficient databases (**PostgreSQL** and **MongoDB**).

This platform is designed to:

- Provide students with an interactive tool to access lessons, assignments, and exams.
- Enable teachers to manage courses, create exams, and analyze student performance effectively.
- Allow parents to track their children's progress and academic performance.
- Integrate **AI-powered features** such as a chatbot, automatic exam generation, and personalized performance analysis to identify students' weaknesses and offer targeted exercises.
- Support teachers with collective insights on students' common weaknesses to enhance teaching strategies.
- Automate **assignment and exam correction**, reducing manual effort and saving time.
- Incorporate modern features like **Qemma Meet**, **AI chat support**, and Student Competition System to increase student engagement and motivation.

1.2 Document Conventions

- **Language & Style:** All documents are written in clear English, with consistent terminology. Acronyms are defined at first use.
- **Formatting:** Numbered headings, bold for key terms, and standard UML/ERD diagrams for system design.
- **Structure:** Each document includes a title, version history, authors, and date. File names follow document-name-vX.Y format.
- **Document Types:** Requirements (IEEE SRS), design (UML diagrams), user manual (step-by-step with screenshots), and testing (numbered test cases).
- **Version Control:** Updates tracked in a version history table, with all documents stored in a central /docs repository.

1.3 Intended Audience and Reading Suggestions

The intended audience of this document includes:

- **High school students** preparing for the General Secondary Education Certificate (الثانوية العامة).
- **Parents and guardians** who play an essential role in supporting students academically and emotionally.
- **Teachers and educational supervisors** who are directly involved in delivering content and preparing students for exams.
- **Educational consultants and project team members** working on building digital tools, study platforms, or guidance programs to assist students during their preparation.

The document aims to provide a clear reference outlining the requirements, features, and methods of the proposed educational support system. It will help the intended audience understand how the system can improve study efficiency, track progress, and offer guidance for both academic and non-academic aspects of the preparation journey.

1.4 Product Scope

The proposed software, Qemma E-Learning System, is designed to automate and digitize the educational process for high school students through an integrated e-learning platform.

The system will help in managing educational content, organizing exams, analyzing student performance, and tracking academic progress efficiently and effectively.

Main Modules

The Qemma E-Learning System consists of several main modules.

- The Course and Lesson Management System is responsible for uploading, organizing, and managing educational materials such as videos, documents, and study notes.
- The Exam and Evaluation System will handle the creation of online exams, automatic correction, and analysis of results to identify each student's strengths and weaknesses.
- The Smart Performance Analysis System uses artificial intelligence techniques to provide personalized reports and insights for both students and teachers, helping them enhance the learning process.
 - Additionally, the system includes a mobile application that allows students and parents to access lessons, grades, and progress updates anytime and anywhere.

System Users

There are three main end users of the Qemma E-Learning System: Students, Teachers, and Parents.

- **Students** can access lessons, take exams, and monitor their academic progress.

- **Teachers** can manage courses, upload educational materials, prepare exams, and evaluate student performance.
- **Parents** can track their children's progress and performance through a dedicated dashboard.
- **Assistants** can respond to students' messages.

To maintain data security and apply proper access restrictions, the system will provide separate login functionalities for each user type.

Objectives

The objective of developing the Qemma E-Learning System is to simplify the educational process and transform it into a smart, fully digital experience.

The system will minimize dependence on traditional teaching and assessment methods, improve the speed and accuracy of performance evaluation, and create a safe and user-friendly environment for all users.

Among the major benefits of the system are its ease of use, high security, efficiency in retrieving information, and accuracy in student assessment.

The development team aims to create a system that is user-appropriate, easy to learn, provides smooth error recovery, and ensures high user satisfaction overall.

2. Overall Description

2.1 Product Perspective

The proposed system is a Smart E-Learning Platform that operates as a standalone solution, yet is designed with high flexibility to allow integration with external services such as OpenAI APIs for AI features and Qemma Meet for live sessions.

The platform consists of four main integrated subsystems:

1. **Web-Based Learning Portal (React.js + Node.js/Express.js)**

This is the primary interface for students, teachers, assistants, and parents. It handles content access, course management, assessments, grading, analytics, and communication through secure REST APIs.

2. **Mobile Companion Application (Flutter)**

A synchronized lightweight interface mainly for students and parents to track lessons, view progress, receive notifications, and access exams or materials using the same backend services.

3. **Hybrid Database Layer (PostgreSQL + MongoDB)**

- PostgreSQL stores all structured academic data such as users, courses, exams, attendance records, and grades.

- MongoDB is used to store unstructured or media content such as lecture videos, PDF notes, or exam recordings.

Together, both databases act as a unified data foundation for the platform.

4. **AI-Powered**

The platform includes optional modular AI features, such as a Chatbot for assistance, an Automated Exam Generator, and Student Weakness Detection Engine. These components are designed as plug-in extensions, ensuring that the system remains scalable and upgradable over time.

Overall, the platform is not dependent on any external LMS but can operate independently or be connected to other systems if required. Its modular design ensures that future enhancements such

as screen recording during exams (WebRTC) or real-time virtual classrooms can be integrated smoothly without affecting the core functionality.

2.2 Product Functions

The proposed educational platform integrates web and mobile applications to connect students, teachers, assistants, and parents within one intelligent learning environment. The system provides the following main functional modules:

1. User Management Module

- Handles registration, authentication, and authorization for three user types: Student, Teacher, Assistant and Parent.
- Provides role-based dashboards and permissions.
- Supports profile management (update personal info, password, profile picture, etc.).

2. Course & Lesson Management

- Teachers can create, update, and manage courses, lessons, and study materials (PDFs, videos, etc.).
- Students can view and access available lessons per subject.
- Lessons may include multimedia content stored in MongoDB.

3. Assignment & Exam Management

- Teachers can create assignments and exams (manual).
- Students can take exams or submit assignments online.
- System supports automatic correction and grading.
- Teachers can review and adjust grades manually if needed.

4. AI-Powered Learning Assistance

- Chatbot to help students answer academic questions or guide them through platform usage.
- AI Exam Generator that creates randomized or topic-based questions automatically.
- Performance Analyzer that identifies students' weaknesses and recommends targeted exercises.

5. Progress Tracking & Analytics

- Students can track their progress, grades, and achievements.
- Parents can monitor their children's performance and attendance.
- Teachers can analyze overall performance trends via graphical reports and statistics.

6. Communication & Collaboration

- Make Qemma Meet for live classes.
- In-app messaging or notifications for reminders, new lessons, or exam alerts.
- Push notifications in the mobile app (Flutter) for updates.

7. Student Competition System

- Students are ranked on a leaderboard based on their performance in completing tests.
- The better a student performs on tests, the higher their position compared to peers, encouraging motivation and a healthy competitive spirit.

8. File Management

- Upload and manage PDFs, videos, and notes through a secure API using Multer.
- Store structured data in PostgreSQL and unstructured files in MongoDB.

Functional Requirements

Below are the detailed functional requirements, organized by module.

1. User Management

ID	Requirement	Description
FR-1	User Registration	The system shall allow users (students, teachers, assistants, parents) to register using email or phone number.
FR-2	Authentication	The system shall authenticate users using JWT-based login.
FR-3	Role Management	The system shall assign roles and access permissions (Student, Teacher, Assistant Parent).
FR-4	Profile Management	Users shall be able to view and update their profiles.
FR-5	Password Management	The system shall support password hashing (bcrypt) and reset functionality.

2. Course & Lesson Management

ID	Requirement	Description
FR-6	Course Creation	Teachers shall be able to create, edit, and delete courses.
FR-7	Lesson Upload	Teachers shall upload lesson materials (PDF, video, notes).
FR-8	Lesson Access	Students shall access lessons for their enrolled courses.

ID	Requirement	Description
FR-9	Multimedia Support	The system shall support streaming or downloading lesson videos.

3. Assignment & Exam Management

ID	Requirement	Description
FR-10	Exam Creation	Teachers shall create exams manually
FR-11	Exam Participation	Students shall take exams within a time limit and submit answers.
FR-12	Auto Correction	The system shall automatically correct objective questions.
FR-13	Manual Review	Teachers shall review subjective answers and adjust grades.
FR-14	Grade Storage	The system shall store grades in PostgreSQL linked to users and exams.
FR-15	Submission Tracking	The system shall track submission time and attempt history.

4. AI Features

ID	Requirement	Description
FR-16	AI Chatbot	The system shall provide an AI-powered chatbot to assist students.
FR-17	AI Exam Generator	The system shall generate exam questions based on selected topics or difficulty.
FR-18	Performance Analysis	The AI module shall analyze student results and identify weak areas.
FR-19	Teacher Insights	The system shall aggregate common weak areas across students for teachers.

5. Progress Tracking & Analytics

ID	Requirement	Description
FR-20	Performance Dashboard	The system shall display a dashboard for students showing progress and grades.
FR-21	Parent Dashboard	Parents shall access reports about their child's performance and attendance.
FR-22	Teacher Reports	Teachers shall view analytics for course performance and student progress.
FR-23	Data Visualization	The system shall visualize data (charts, graphs) for progress tracking.

6. Communication & Notifications

ID	Requirement	Description
FR-24	Qemma Meet Integration	The system shall generate meeting links for live classes.
FR-25	In-app Messaging	The system shall allow messages/announcements between teachers or Assistant and students.
FR-26	Push Notifications	The mobile app shall send push notifications for updates and reminders.

7. Competition

ID	Requirement	Description
FR-27	Leaderboard	The system shall display top students based on total Grades.

8. File Management

ID	Requirement	Description
FR-28	File Upload	The system shall allow teachers to upload PDFs, videos, and notes securely.
FR-29	File Storage	The system shall store structured data in PostgreSQL and files in MongoDB.
FR-30	File Access Control	Only authorized users shall access relevant files.

9. Security & Session Management

ID	Requirement	Description
FR-31	JWT Tokens	All API calls shall be secured with JWT authentication.
FR-32	Data Encryption	Passwords and sensitive data shall be encrypted using bcrypt.
FR-33	Access Logs	The system shall log all login attempts and major actions.

2.3 User Classes and Characteristics

The system targets multiple categories of users, each with different roles and permissions that align with their needs within the educational platform.

1. Student

Description:

The primary user of the platform who uses it to access lessons, complete assignments and exams, and track academic progress.

Characteristics:

- Has basic technical skills to use the application easily.
- Needs a simple and intuitive user interface (on both web and mobile).
- Interacts with the Chatbot for learning assistance and exercise generation.
- Receives performance analytics and personalized feedback on weak points.
- Gets push notifications for exams, lessons, and updates.
- Can access videos and study materials

2. Teacher / Instructor

Description:

Responsible for managing educational content, creating lessons and exams, and tracking student performance.

Characteristics:

- Has permissions to create and manage courses, lessons, and exams.
- Can upload educational materials (videos, PDFs, etc.).
- Receives analytical reports on both individual and group performance.
- Is notified about students' common weak areas through AI analysis.
- Can use the Exam Generator to automatically create exams.
- May conduct live classes through Live Meet Integration.

3. Parent

Description:

Uses the system to monitor their children's academic progress and communicate with teachers.

Characteristics:

- Has an account linked to one or more students.
- Can view grades, attendance, and progress reports via the mobile app.
- Receives notifications about important tasks, homework, or exams.
- Can contact teachers through the system.
- Uses a simplified interface focused on viewing information rather than interaction.

4. Assistant

Description:

Responsible for answering students' questions.

Characteristics:

- Responds to students' questions to make sure they understand the subjects.
- Provides guidance and support to students.

5. AI System / Intelligent Engine

Description:

The intelligent core of the system is responsible for analyzing student performance, generating questions, and providing insights.

Characteristics:

- Uses artificial intelligence to evaluate each student's learning level and detect weak areas.
- Relies on historical data from the databases to identify global patterns among students.
- Generates personalized quizzes and exercises based on individual performance.
- Sends analytical reports to teachers about topics needing reinforcement.
- Integrates with the Chatbot to assist students in learning and answering queries.

Summary of Relationships:

User Type	Main Responsibilities	Interface	Access Level
Student	View lessons, take exams, track progress	Web & Flutter App	Limited
Teacher	Manage content, create exams, analyze performance	Web Dashboard	Medium
Parent	Monitor child's progress, view grades	Flutter App	Limited
Assistant	Provide guidance and support to students	Web Dashboard	Medium
AI System	Analyze data, generate insights, support automation	Backend	Integrated

2.4Operating Environment

Software Requirements:

- **Operating System:** supports any desktop operating systems (including Linux, Windows, and MacOS) and popular mobile operating systems Android 7 or higher, and iOS 13 or higher
- **Node.js:** v22.20.0
- **Express.js:** v5.1.0
- **MongoDB:** v8.0
- **PostgreSQL:** v18.0
- **React.js:** v19.2.0
- **npm** package manager
- **Flutter:** 3.35.5
- **Dart:** 3.9.2

Hardware Requirements:

- **Hard Drive:** 10 GB of free space
- **RAM:** Minimum of 8 GB of RAM

2.5 Design and Implementation Constraints

2.5.1. Design Constraints

1. User Interface Consistency:

The user interfaces must be designed consistently and be easy to use for all types of users (students, teachers, assistants and parents), with a responsive layout that adapts to various devices (desktops, tablets, and mobile phones).

2. Technology Restriction:

The system is required to use React.js for the web frontend and Flutter for the mobile application to ensure high performance and a unified user experience across platforms.

3. Accessibility and Usability:

The design must follow accessibility principles regarding color contrast, font sizes, and visual hierarchy to accommodate different age groups and accessibility needs.

4. Data Synchronization:

Both the web and mobile applications must integrate seamlessly with the same backend REST API to ensure consistent and synchronized data across all platforms.

5. Integration Flexibility:

The system should be designed to allow easy integration with external services such as AI Chatbot APIs without the need to rebuild core system components.

6. Security by Design:

Security principles must be considered from the early design phase, especially for handling sensitive data such as passwords and student grades.

2.5.2 Implementation Constraints

7. Backend Framework Restriction:

The backend must be developed using Node.js and Express.js to ensure compatibility with RESTful architecture and handle concurrent requests efficiently.

8. Database Limitation:

The relational database PostgreSQL is used for structured data (e.g., users, exams, grades), while MongoDB stores unstructured data such as videos and PDFs.

9. Security Standards:

Passwords must be encrypted using bcrypt, authentication and session management handled via JWT (JSON Web Token), and file uploads restricted and validated using multer.

10. Performance and Resource Constraints:

Since the system may be hosted on limited-resource servers (e.g., free-tier or academic environments), performance optimization should be prioritized through query optimization, caching, and reduced heavy computations.

11. Development Environment Constraints:

Only open-source tools and frameworks should be used. Code must follow clean code principles and maintainable architecture to support future scalability.

12. Mobile Integration Constraint:

The mobile application must be developed exclusively using Flutter and must adhere to the same design and data consistency standards as the web platform.

2.6Project Documentation

2.6.1 Project charter

Team:

Amjad Ibrahim: full stack (The Leader)

Belal Samir: full stack

Esmail Ahmed: full stack

Ibrahim Mohsen: full stack

Ahmed Rezk: mobile (Flutter)

Background of the Client and Main Problem:

The client is an educational institution aiming to modernize its learning process. Currently, it faces issues with fragmented systems, limited online interaction, and difficulty tracking student performance. The lack of an integrated digital platform hinders communication and efficiency. The proposed solution addresses these problems by providing a unified, AI-powered system for learning management, performance tracking, and collaboration

2.6.2 Project Proposal

This project proposes the development of an integrated educational platform that connects students, teachers, and parents through interactive digital tools.

The system provides course materials, lessons, and exams, with real-time performance tracking and communication features.

An AI-driven module enhances learning by generating personalized exams, detecting weak points, and offering targeted exercises.

The platform supports web and mobile interfaces, ensuring accessibility and ease of use for all user types.

2.7 User Documentation - Smart Education System

The user manual provides a clear idea of how to interact with the system. It is written in simple, understandable language, hiding the internal complexity of the system. A hard copy of the manual will be delivered to the client along with the system. The system supports three types of users: Student, Parent, Assistant ,and Teacher.

Section	Description	User Role	Steps / Notes
1. System Requirements	Minimum requirements to run the system.	All	Web: Chrome, Firefox, Edge; Mobile: Android 10+; Internet connection required.

Section	Description	User Role	Steps / Notes
2. Access & Login	How to access system and log in.	Student, Parent, Teacher, Assistant	Web: Go to URL, enter email/password, click Login. Mobile: Download app, enter credentials, click Login.
3. User Roles Overview	Explanation of available user roles and their responsibilities.	All	Student: view lessons, exams, grades. Parent: monitor child progress. Teacher: manage lessons, exams, grades. Assistant: manage student question
4. Dashboard	Main page showing overview of relevant data.	Student, Parent, Teacher, Assistant	Student: courses, exams, notifications. Parent: child progress summary. Teacher: class overview. Assistant : manage student question
5. Courses / Lessons	Access and manage course content and lessons.	Student, Teacher	Student: view lessons and resources. Teacher: create/manage lessons, upload materials.
6. Exams	Exam management and participation.	Student, Teacher	Student: start/submit exams. Teacher: create exams, assign, review submissions.
7. Results / Analytics	Viewing and analyzing performance.	Student, Parent, Teacher	Student: view grades and feedback. Parent: view child's results. Teacher: analyze class performance, weak areas.
8. Notifications	Alerts for exams, lessons, or system updates.	Student, Parent	Check notifications panel regularly for updates.
9. Troubleshooting / FAQs	Common problems and solutions.	All	Forgot password, video not loading, grades not displayed. Instructions for resolving issues.

2.8 Assumptions and Dependencies

Assumptions:

- a. The client has agreed to provide the necessary resources and licenses for software and tools used in the project, including but not limited to React.js development tools, Node.js environment, PostgreSQL and MongoDB licenses (if needed). It is assumed that this decision will remain unchanged during future phases of software development.

- b. The client's end-users will primarily operate the system on Windows 7, Windows 8, or newer versions for desktop access, and Android 10+ for mobile access.
- c. Users have basic knowledge of how to operate a web browser or mobile application, as the system is designed for standard usage without extensive technical training.
- d. Internet connectivity is assumed to be available for proper synchronization between the web application, mobile app, and backend services.

Dependencies:

1. Frontend Dependencies: React.js for web interface development; Material-UI / Tailwind CSS for styling; Axios / Fetch API for communication with backend REST APIs
2. Backend Dependencies: Node.js and Express.js for REST API; bcrypt for password encryption; jsonwebtoken (JWT) for authentication; Multer for file uploads.
3. Database Dependencies: PostgreSQL for structured data (users, courses, exams, grades); MongoDB for unstructured data (videos, PDFs).
4. Mobile App Dependencies: Flutter framework for cross-platform mobile application; Integration with REST API backend.
5. Optional / Future Dependencies: AI Chatbot API for intelligent tutoring; Qemma Meet for live classes; WebRTC or similar libraries for exam monitoring or recording.

3. External Interface Requirements

التفاصيل

Start Studying a course

The screenshot displays the Qemma AI-Enhanced Learning and Management System interface for a course titled "الرياضيات - التفاضل والتكامل" (Calculus - Differentiation and Integration). The interface is in Arabic and features a purple header with navigation icons and a course title. Below the header, a progress bar indicates 75% completion. The main content area is divided into two columns. The left column contains course statistics: 6 topics completed, 18 topics remaining, 156 students, and a 4.8 rating. The right column lists the course topics: مقدمة وتعريفات (Introduction and Definitions), المفاهيم الأساسية (Basic Concepts), and تطبيقات عملية (Practical Applications). Each topic has a completion status icon. At the bottom, there are three buttons: "OFFICE HOUR" (حجز), "سؤال للمدرس" (Ask the teacher), and "تعليم فردي" (Individual teaching).

3.2 Hardware Interfaces

Since the system is an interactive educational website operating entirely online, it does not require dedicated hardware installation on the client side.

Users can access the platform through any device equipped with a modern web browser and a stable internet connection.

Client Side:

The platform can be accessed by students, teachers, assistants, and parents using:

Desktop or laptop computers

Smartphones or tablets

Recommended minimum specifications:

- RAM: 1 GB or higher
- Web Browser: Latest version of Google Chrome, Microsoft Edge, or Firefox
- Internet Connection: Stable and high-speed broadband or fiber connection

Server Side:

The hosting server should meet the following minimum requirements to ensure smooth and efficient operation:

- Processor (CPU): Quad-core or higher
- RAM: At least 32 GB
- Storage: Minimum of 200 GB of free disk space
- Internet: Continuous high-speed connection for uninterrupted service

3.3 Software Interfaces

The Qemma E-Learning System is built using modern web technologies to provide an interactive, secure, and scalable learning environment.

Operating Environment:

The system runs on any operating system that supports a modern web browser (Windows, macOS, Linux, Android, iOS).

Technologies Used:

Refer to section 2.4 Operating Environment.

Integrated Services:

- Email API for sending notifications and alerts
- AI Chatbot for student support and interactive communication

3.4 Communications Interfaces

As an online platform, continuous and secure internet communication is essential for the system's operation.

Communication Methods within the System:

- Secure HTTPS communication between the client browser and the web server to protect user data.
- Automated email notifications sent to users for registration, exam results, and other important updates.
- AI-based chat support for real-time assistance and guidance.
- Real-time data synchronization between the server and users to ensure instant updates of lessons, grades, and progress.

Requirements:

- A stable and high-speed internet connection for all users.
- A secure web server with an active SSL certificate.
- The server should handle a large number of concurrent users without performance degradation.

4. System Features

4.1E-R Diagram

4.2 Use Case Diagram

4.3 Use Case Scenarios

1. Login

Item	Description
Use Case Name	Login
Primary Actor	Student / Teacher / Parent / Assistant
Goal	Authenticate and access the platform
Preconditions	The user has a registered account
Postconditions	User is logged in and redirected to their dashboard
Main Flow	1) User enters email & password. 2) System verifies credentials. 3) System checks user role. 4) System loads the appropriate dashboard.
Exception Flow	Invalid credentials → Display error message.

2. Register Account

Item	Description
Primary Actor	Student / Parent / Teacher / Assistant
Goal	Create a new account
Preconditions	User identity may need verification by teacher (for Assistant)
Main Flow	1) User enters registration details. 2) System validates email uniqueness. 3) System stores user record. 4) System sends confirmation email.
Postconditions	Account created successfully.

3. View Courses

Item	Description
Primary Actor	Student
Goal	Access list of enrolled courses
Main Flow	1) Student opens Courses page. 2) System retrieves enrolled courses. 3) Student selects a course to view lessons.

4. View Lesson Content (Video / PDF)

Item	Description
Primary Actor	Student
Goal	Study course lesson materials
Preconditions	Student must be enrolled in the course
Main Flow	1) Student opens a lesson. 2) System streams video.

Item	Description
	3) Student downloads/opens PDF notes. 4) System logs lesson engagement for progress tracking.
Postconditions	Optional attendance record is created.

5. Take Exam

Item	Description
Primary Actor	Student
Goal	Evaluate learning through exam submission
Preconditions	Exam must be currently available
Main Flow	1) Student enters exam. 2) System loads questions. 3) Student submits answers. 4) System stores attempt & calculates score.
Exception Flow	If time expires → Auto-submit exam.

6. Auto/Manual Exam Grading

Item	Description
Primary Actor	Teacher / AI System
Goal	Grade exam submissions
Main Flow	1) System auto-grades objective questions (MCQ/TF). 2) Teacher reviews written or coding questions. 3) Teacher finalizes grade. 4) System updates grade table.

7. View Grades & Performance Dashboard

Item	Description
Primary Actor	Student
Goal	Understand academic performance
Main Flow	1) Student opens performance page. 2) System displays grades, trends & rank. 3) Student reviews weak and strong topics.

8. AI Chat / Homework Help

Item	Description
Primary Actor	Student
Goal	Get real-time learning support
Main Flow	1) Student sends question to AI chatbot. 2) AI analyzes context. 3) AI responds with explanation or examples.

9. AI Weakness Detection

Item	Description
Primary Actor	AI System
Goal	Identify student's weak points
Main Flow	1) AI reads exam attempts & lesson logs. 2) AI calculates difficulty-based performance weight. 3) AI generates Weakness Report. 4) Student + Teacher + Parent receive report.

10. Teacher Creates Course

Item	Description
Primary Actor	Teacher
Goal	Provide structured educational content
Main Flow	1) Teacher opens Create Course page. 2) Teacher enters title, description, difficulty & goals. 3) System confirms creation. 4) Course becomes available to students.

11. Parent Monitoring Dashboard

Item	Description
Primary Actor	Parent
Goal	Track student progress & performance
Main Flow	1) Parent logs into the portal. 2) System shows attendance, grades and warnings. 3) Parent monitors improvement trends.

12. Schedule Live Class (Qemma Meet)

Item	Description
Primary Actor	Teacher
Goal	Host live virtual lecture
Main Flow	1) Teacher clicks "Schedule Live Session". 2) System creates Qemma Meet link. 3) Students receive notification. 4) Meeting details appear in student dashboard.

4.4 Activity Diagrams

Activity Diagram: Schedule Live Class (Google Meet Integration)

5. Other Nonfunctional Requirements

5.1 Performance

- The frontend should respond within 2 seconds for each user interaction.
- React and Flutter interfaces must load quickly even on slow internet connections (≤ 3 Mbps).
- Backend API must handle at least 500 requests per minute without noticeable delays.
- Uploaded files (videos, PDFs) should be compressed to optimize load and storage time.

5.2 Safety

- User passwords must be encrypted using bcrypt before being stored in the database.
- Use JWT (JSON Web Tokens) for secure authentication and session management.
- Implement role-based access control (RBAC) to restrict actions by user type (Student, Teacher, Parent).
- Protect the system against SQL Injection, XSS, and CSRF attacks.
- All communication between client and server must occur over HTTPS.
- Validate uploaded files and restrict file types to safe formats (e.g., PDF, MP4).

5.3 Scalability

- Backend should allow horizontal scaling as the number of users increases.
- Architecture should support modular or microservice expansion for future features.
- System should handle simultaneous requests from multiple users efficiently.

5.4 Reliability

- Ensure at least 99.5% uptime.
- Implement proper error handling to avoid crashes and provide clear feedback to users.
- Automate daily backups for PostgreSQL and MongoDB databases.
- Failure of one service must not affect the operation of others.

5.5 Usability

- Interface should be intuitive, responsive, and easy to navigate for users of all ages.
- Design should be mobile-friendly and support multiple screen sizes.
- Flutter app interfaces must be optimized for Android and iOS.
- Support both Arabic and English languages.

5.6 Maintainability

- Follow modular, clean, and well-documented coding practices.
- Use Git/GitHub for version control and collaboration.

- Separate frontend and backend for easier updates and maintenance.
- Maintain a dedicated testing environment before deploying new features.

5.7 Compatibility

- Web app should be compatible with major browsers (Chrome, Edge, Firefox, Safari).
- Mobile app should run on both Android and iOS platforms.
- RESTful API should be interoperable with third-party applications (e.g., Google Meet, AI APIs).

5.8 Testability

- Provide a testing environment separate from production.
- Write unit tests for backend using Jest or Mocha.
- Use React Testing Library for frontend testing.
- Conduct performance and security tests before deployment.

AI and Advanced Features Reliability:

- Ensure AI-related modules do not degrade system performance.
- Store AI analysis results in separate collections or databases.
- Monitor API usage and resource consumption regularly to maintain stability.

5.9 Software Quality Attributes

- **Availability:** The system shall remain available with minimal downtime, especially during assessments and submissions.
- **Correctness:** The system shall generate exams, evaluate responses, and display results accurately according to defined academic rules.
- **Efficiency:** Core operations such as login, content loading, exam generation, and auto-grading shall perform quickly without unnecessary resource consumption.
- **Flexibility:** The system shall support adding new modules such as AI-based tools, or new learning levels without major architectural changes.
- **Integrity:** Student and teacher data shall be protected from corruption, and data integrity shall be preserved during exams, submissions, and file uploads.
- **Maintainability:** - The system shall be easy to update, debug, and improve due to modular structure and clear documentation.
- **Portability:** - The system shall run on web and mobile platforms and support deployment on different cloud/server environments with minimal adjustments.
- **Reliability:** - The system shall function consistently and avoid failures during critical operations such as exam attempts, submissions, and evaluation.
- **Reusability:** - Core components such as authentication, user management, and auto-grading modules shall be reusable in other education systems.

- **Testability:** - All system components including exam generation, authentication, and content delivery shall be easily testable through automated and manual testing approaches.
- **Usability:** - The platform shall provide a simple and intuitive interface for students, teachers, and parents, ensuring easy access to lessons, exams, and reports.
- **Robustness:** - The system shall handle unexpected events such as interrupted connections or invalid file uploads without data loss or system failure.
- **Security:** - User identities, roles, and sensitive data shall be protected through authentication, authorization, and encryption, and cheating prevention measures shall be applied during exams.

5.10 Business Rules

Student

- student must register and verify account
- student can enroll in available courses only
- student must submit assignments before deadlines
- student can take exams only once
- student cannot modify grades or exam data
- student can view personal progress and reports only

Teacher

- teacher can create courses, lessons, exams, and assignments
- teacher can mark grades and review student submissions
- teacher cannot edit student personal data
- teacher can view only students enrolled in their courses
- teacher can generate reports and track student performance
- teacher can add learning resources (PDF, videos, links)

Assistant

- assistant can respond to students' questions
- assistant can provide guidance and support to students

Parent

- parent must register and verify account
- parent can view only their children's progress & grades
- parent cannot edit student data or coursework
- parent receives notifications on performance and deadlines
- parent can track attendance & exam results
- parent can view payments/subscriptions related to child

AI Assistant / System Rules

- AI suggestions must be based on student progress only
- system cannot change grades — only suggest improvements
- weak topics identified are shown to teacher & student
